

IMPORTANT INFORMATION FOR PROCESSING MATERIAL CONTAINING QUARTZ/SILICA

Respirable Crystalline Silica (RCS) dust is generated when processing and fabricating any material containing quartz (crystalline silica).

Exposure to RCS can cause severe illnesses such as silicosis. Silicosis more commonly results from exposure to RCS over many years, but higher short-term exposures can cause it to develop rapidly. Workers exposed to RCS are also at increased risk for Chronic Obstructive Pulmonary Disease (COPD), kidney disease and lung cancer.

DANGER - THIS PRODUCT CONTAINS QUARTZ/SILICA - REFER TO SAFETY DATA SHEET (SDS) FOR MATERIAL BEING PROCESSED BEFORE USE (www.cdkstone.com.au/important-information)

Harmful by inhalation.
Danger of serious damage to health by prolonged exposure.
May cause cancer (inhalation).
Causes damage to lungs through prolonged or repeated exposure (inhalation).
May cause respiratory tract irritation.

IF YOU ARE PROCESSING MATERIAL CONTAINING CRYSTALLINE SILICA:

It is highly recommended to use wet processing methods and equipment. If dry processing, the MINIMUM level of protection is a shroud and a H class rated vacuum with a High Efficiency Particulate Air (HEPA) filter meeting Australian Standard AS/NZS 60335.2.69.

Wear appropriate respiratory protection. The minimum class of Respiratory Protective Equipment (RPE) is specified in the SDS. Refer to Australian Standard/New Zealand Standard AS/NZS 1715 & AS/NZS 1716 when selecting RPE.

Do not breathe or expose others to dusts generated from processing - use in well ventilated area.

Wash hands and face thoroughly after handling.

Do not eat, drink or smoke when processing this product.

Wear protective gloves/protective clothing/eye protection.

Dispose of residues in accordance with local regulations.

Regular medical examinations are required as per local health and safety regulations if exposed to RCS dust.

Refer to your local workplace safety regulator for details.
